Completed on	Wednesday, 7 May 2025, 3:40 PM
Time taken	21 mins 54 secs
Grade	**100.00** out of 100.00

Question **1**

Correct

Mark 20.00 out of 20.00

Write a python program to create a stack with a maximum size of 5 using Lifo Queue. Get the input from the user and check whether the stack is full and then display the stack values in reverse order

For example:

Input	Result
4 10 20 30 40	False 40 30 20 10
5 2 4 6 8 3	True 3 8 6 4 2

Answer: (penalty regime: 0 %)

Reset answer

```
from queue import LifoQueue
stack = LifoQueue(maxsize=5)
n= int(input())
for i in range(n):
    stack.put(input())
print(stack.full())
for i in range(n):
    print(stack.get())
```

	Input	Expected	Got	
✔	4 10 20 30 40	False 40 30 20 10	False 40 30 20 10	✔
✔	5 2 4 6 8 3	True 3 8 6 4 2	True 3 8 6 4 2	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.

Question **2**

Correct

Mark 20.00 out of 20.00

Develop a python program to get string values from the user and display the values using circular queue

For example:

Input	Result
4 Python Java C C++	Python Java C C++
5 Java C# C Python C++	Java C# C Python C++

Answer: (penalty regime: 0 %)

Reset answer

```
class MyCircularQueue():
    def __init__(self, k):
        self.k = k
        self.queue = [None] * k
        self.head = self.tail = -1
    def enqueue(self, data):
        if ((self.tail + 1) % self.k == self.head):
            print("The circular queue is full\n")
        elif (self.head == -1):
            self.head = 0
            self.tail = 0
            self.queue[self.tail] = data
        else:
            self.tail = (self.tail + 1) % self.k
            self.queue[self.tail] = data
    #
    def printCQueue(self):
        if(self.head == -1):
            print("No element in the circular queue")
        elif (self.tail >= self.head):
            for i in range(self.head, self.tail + 1):
                print(self.queue[i], end=" ")
```

	Input	Expected	Got	
✔	4 Python Java C C++	Python Java C C++	Python Java C C++	✔
✔	5 Java C# C Python C++	Java C# C Python C++	Java C# C Python C++	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.

Question **3**

Correct

Mark 20.00 out of 20.00

Develop a python program to add only the even unique numbers using appendleft() from n given numbers

For example:

Input	Result
5 2 5 8 2 4	deque([4, 8, 2])
6 3 5 2 8 2 5	deque([8, 2])

Answer: (penalty regime: 0 %)

```
from collections import deque
class Queue:
  def __init__(self):
      self.queue = deque()
  def add_element(self,val):
      if val%2==0 and val not in self.queue:
          self.queue.appendleft(val)
          return True
      return False
TheQueue = Queue()
n=int(input())
for i in range(n):
    TheQueue.add_element(int(input()))
print(TheQueue.queue)
```

	Input	Expected	Got	
✔	5 2 5 8 2 4	deque([4, 8, 2])	deque([4, 8, 2])	✔
✔	6 3 5 2 8 2 5	deque([8, 2])	deque([8, 2])	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.

Question **4**

Correct

Mark 20.00 out of 20.00

Write a python program to reverse a string using stack concept

For example:

Input	Result
Python	nohtyP

Answer: (penalty regime: 0 %)

```
def swap(s, i, j):
    temp = s[i]
    s[i] = s[j]
    s[j] = temp

def reverse(s, i=0, j=0):
    if j == len(s):
        return i

    i = reverse(s, i, j + 1)
    if i <= j:
        swap(s, i, j)
        i += 1

    return i

s = input()

chars = [*s]
reverse(chars)
s = ''.join(chars)
```

	Input	Expected	Got	
✔	Python	nohtyP	nohtyP	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.

Question **5**

Correct

Mark 20.00 out of 20.00

Write a Python program to get the name, attendance and Id of a student and check they are eligible for exam using multiple inheritance

Note: attendance >75 eligible student else Not Eligible student

For example:

Input	Result
saveetha 21 88	saveetha 21 Eligible for Exam
sachin 22 71	sachin 22 Not Eligible for Exam

Answer: (penalty regime: 0 %)

```
class l:
    def __init__(self,name,Id,at):
        self.name=name
        self.at=at
        self.id=Id
    def Print(self):
        print(self.name)
        print(self.id)
        if self.at>75:
            print("Eligible for Exam")
        else:
            print("Not Eligible for Exam")
k=l(input(),int(input()),int(input()))
k.Print()

```

	Input	Expected	Got	
✔	saveetha 21 88	saveetha 21 Eligible for Exam	saveetha 21 Eligible for Exam	✔
✔	sachin 22 71	sachin 22 Not Eligible for Exam	sachin 22 Not Eligible for Exam	✔

Passed all tests! ✔

Correct

Marks for this submission: 20.00/20.00.
